4. Segments Description

Order Status Enquiry Heading Section

UNH - M 1	- Message header This segment is used to head, identify and specify a message.
BGM - M 1	- Beginning of message This segment is used to indicate the type and function of a message and to transmit the identifying number.
DTM - M 5	- Date/time/period This segment is used to specify the date of the order status enquiry message.
FTX - C 20	- Free text This segment is used to provide free form or coded text information related to the entire message.
SG1 - M 25	- NAD-SG2 A group of segments identifying the parties with associated information.
NAD - M 1	- Name and address This segment is used to identify the parties involved in the order status enquiry message. Identification of the buyer, or buyer's agent, and the supplier, or supplier's agent, is mandatory in the order status enquiry message. A logistic service provider may act as an agent for a buyer or a supplier.
SG2 - C 5	- CTA-COM A group of segments giving contact details of the specific person or department within the party identified in the NAD segment.
CTA - M 1	- Contact information This segment is used to identify departments and/or persons within the party specified in the NAD.
COM - C 5	- Communication contact This segment is used to identify the communications number and the type of communications used for the person identified in the CTA segment.

Order Status Enquiry Detail Section

SG3 - C 999	- DOC-DTM-SG4 A group of segments providing details of the individual requested order(s).
DOC - M 1	- Document/message details This segment is used to identify the document(s) for which status information is being requested.
DTM - C 5	- Date/time/period This segment is used to specify dates relating to the references given in the previous DOC segment.
SG4 - C 200000	- LIN-PIA-IMD-SG5-SG6 A group of segments providing details of the individual requested order(s) lines.
LIN - M 1	- Line item This segment is used to identify a product on an order upon which an enquiry is being made.
PIA - C 25	- Additional product id This segment is used to specify additional or substitutional item identification codes such as a buyer's or supplier's item number.
IMD - C 10	- Item description This segment is used to further identify the current line item.

4. Segments Description

SG5 - C 99	- RFF-DTM A group of segments giving references related to the order line(s) and, where relevant, its dates.
RFF - M 1	- Reference This segment is used to identify specific order number(s) which is/are related to the current line item. If required the unique line number from specific orders may also be specified. The segment should only be used if further references to those provided in the DOC segment in group 3 are required.
DTM - C 1	- Date/time/period This segment is used to specify dates relating to the references given in the previous RFF segment.
SG6 - C 99	- LOC-DTM-QTY A group of segments used to request the status of only certain delivery of an order line and or the quantity.
LOC - M 1	- Place/location identification This segment is used to identify the place of delivery for the quantity specified in the QTY segment.
DTM - C 5	- Date/time/period This segment is used to specify any dates and/or times related to the LOC segment group.
QTY - C 1	- Quantity This segment is used to specify quantities related to the current LOC segment group.

Order Status Enquiry Summary Section

UNT - M 1	- Message trailer This segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.

5. Segments Layout

This section describes each segment used in the EANCOM® Order status enquiry message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

Notes:

1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.
- 2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	R	Indicates that the entity is required and must be sent.
- ADVISED	A	Indicates that the entity is advised or recommended.
- DEPENDENT	D	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	O	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	N	Indicates that the entity is not used and should be omitted.

- 2.3 If a composite is flagged as **N, NOT USED**, all data elements within that composite will have blank status indicators assigned to them.
3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	*	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.

4447 Free text format code	C an..3	N		
<p>Segment Notes:</p> <p>This segment is used to provide free form or coded text information related to the entire message. Use of this segment in free form is not recommended since in most cases it inhibits automatic processing of the order status enquiry message. Coded references to standard texts is an available functionality which enables automatic processing and reduces transmission and processing overheads. Standard texts should be mutually defined among trading partners and can be used to cover legal and other requirements.</p> <p>Example: FTX+AAI++001::91' (E.g. General information standard text code 001 = Non delivery of order by latest date will lead to automatic order cancellation.)</p>

Segment Notes:

This segment is used to specify additional or substitutional item identification codes such as a buyer's or supplier's item number.

Examples:

PIA+1+ABC5343:MF'

In this example the PIA segment is used to provide an additional identification to the GTIN provided in the LIN segment. The GTIN 4000862141404 provided in the LIN segment refers to the manufacturers article number ABC5343.

PIA+5+2209953C001L:AC'

This example details the HIBC code 2209953C001L which is provided as the primary product code because no GTIN was provided in the LIN segment.
