## 1. Introduction

---

### Status

MESSAGE TYPE : APERAK  
REFERENCE DIRECTORY : D.01B  
EANCOM® SUBSET VERSION : 003

### Definition

A message from the party who received an original message, to the party who issued the original message, to acknowledge to the message issuer the receipt of the original message by the recipient's application and to acknowledge errors made during the processing within the application.

### Principles

A message which is first processed at translator level to detect syntax errors and to acknowledge its receipt (CONTRL) is then transmitted to the receiving application to be processed. Upon reaching this state the receiving application may issue an acknowledgement confirming receipt of the message by the application.

The picture below shows the difference between the CONTRL message and APERAK:

The APERAK message should be generated by the application software NOT by an EDI-translator software.

The APERAK message must NOT be used to acknowledge the receipt of an interchange.

Parties as stated in the message which is being acknowledged, must be mentioned in the APERAK. Such parties are not the sender and the receiver identified at the interchange level.

Within one APERAK message it is NOT possible to acknowledge the receipt of more than one message.

Example with an INVOIC message:

### Application error and acknowledgement message Heading Section

UNH - M 1	- Message header This segment is used to head, identify and specify a message.
BGM - M 1	- Beginning of message This segment is used to indicate the type and function of a message and to transmit the identifying number.
DTM - C 9	- Date/time/period This segment is used to specify the date of the message.
<b>SG1</b> - C 99	- <b>DOC-DTM</b> A segment group to provide information on the document being acknowledged.
DOC - M 1	- Document/message details To identify documents and details directly related to it.
DTM - C 99	- Date/time/period To specify date, and/or time, or period.
<b>SG2</b> - C 9	- <b>RFF-DTM</b> A group of segments to specify the document/message to which the current message relates, and related date and time.
RFF - M 1	- Reference This segment is used to specify reference numbers related to the message which is being acknowledged.
DTM - C 9	- Date/time/period This segment is used to specify dates or periods relating to the previous RFF segment.
<b>SG3</b> - C 9	- <b>NAD</b> A group of segments to specify the identifications of message sender and message receiver.
NAD - M 1	- Name and address This segment is used to identify the parties who exchanged the message which is being acknowledged.

### Application error and acknowledgement message Detail Section

<b>SG4</b> - C 99999	- <b>ERC-FTX-SG5</b> A group of segments to identify the application error(s) within a specified received message and to give specific details related to the error type or to precise the type of acknowledgement.
ERC - M 1	- Application error information This segment is used to identify the type of application error in the previously sent message.
FTX - C 1	- Free text This segment is used to provide free text information related to the application error.
<b>SG5</b> - C 9	- <b>RFF-FTX</b> A group of segments to specify the functional entity reference (e.g. goods item level, equipment level) relating to the specified error; further details can be added to identify the error more precisely.
RFF - M 1	- Reference This segment is used to specify reference numbers related to the message which is being acknowledged.

## **4. Segments Description**

---

FTX - C 9                      - Free text

This segment is used to provide free text information related to the application error.

### **Application error and acknowledgement message Summary Section**

UNT - M 1                      - Message trailer

This segment is a mandatory UN/EDIFACT segment. It must always be the last segment in the message.

## 5. Segments Layout

This section describes each segment used in the EANCOM® Application error and acknowledgement message. The original EDIFACT segment layout is listed. The appropriate comments relevant to the EANCOM® subset are indicated.

### Notes:

1. The segments are presented in the sequence in which they appear in the message. The segment or segment group tag is followed by the (M)andatory / (C)onditional indicator, the maximum number of occurrences and the segment description.
2. Reading from left to right, in column one, the data element tags and descriptions are shown, followed by in the second column the EDIFACT status (M or C), the field format, and the picture of the data elements. These first pieces of information constitute the original EDIFACT segment layout.

Following the EDIFACT information, EANCOM® specific information is provided in the third, fourth, and fifth columns. In the third column a status indicator for the use of (C)onditional EDIFACT data elements (see 2.1 through 2.3 below), in the fourth column the restricted indicator (see point 3 on the following page), and in the fifth column notes and code values used for specific data elements in the message.

- 2.1 (M)andatory data elements in EDIFACT segments retain their status in EANCOM®.
- 2.2 Additionally, there are five types of status for data elements with a (C)onditional EDIFACT status, whether for simple, component or composite data elements. These are listed below and can be identified when relevant by the following abbreviations:

- REQUIRED	<b>R</b>	Indicates that the entity is required and must be sent.
- ADVISED	<b>A</b>	Indicates that the entity is advised or recommended.
- DEPENDENT	<b>D</b>	Indicates that the entity must be sent in certain conditions, as defined by the relevant explanatory note.
- OPTIONAL	<b>O</b>	Indicates that the entity is optional and may be sent at the discretion of the user.
- NOT USED	<b>N</b>	Indicates that the entity is not used and should be omitted.

- 2.3 If a composite is flagged as **N, NOT USED**, all data elements within that composite will have blank status indicators assigned to them.
3. Status indicators detailed in the fourth column which directly relate to the code values detailed in the fifth **column** may have two values:

- RESTRICTED	<b>*</b>	A data element marked with an asterisk (*) in the fourth column indicates that the listed codes in column five are the only codes available for use with this data element, in this segment, in this message.
- OPEN		All data elements where coded representation of data is possible and a restricted set of code values is not indicated are open (no asterisk in fourth column). The available codes are listed in the EANCOM® Data Elements and Code Sets Directory. Code values may be given as examples or there may be a note on the format or type of code to be used.

4. Different colours are used for the code values in the segment details: restricted codes are in red and open codes in blue.
